

IDOWU MICHAEL OPEYEMI

Full-Stack Developer — React, TypeScript, Node.js

Lagos, Nigeria | idowumichael900@gmail.com | github.com/Mikesticks4Tech | my-portfolio-eight-dun-99.vercel.app

PROFESSIONAL SUMMARY

Full-Stack Developer with 2 years of hands-on experience shipping production React, TypeScript, and Node.js applications with real-time systems, third-party payment integrations, and role-based authentication. Built and deployed six full-stack products end-to-end — from database schema through live production infrastructure — spanning fintech, logistics, and e-commerce. Works fluently across REST API design, WebSocket architecture, and MongoDB schema design, with a track record of independently debugging and resolving cross-environment production issues (CORS, case-sensitivity, dependency conflicts).

TECHNICAL SKILLS

Frontend: React.js, TypeScript, JavaScript (ES6+), Vite, Tailwind CSS, Responsive Design

Backend: Node.js, Express.js, REST API Design, Socket.io (WebSockets)

Database: MongoDB, Mongoose, Schema Design

Auth & Security: JWT, Role-Based Access Control (RBAC), bcrypt

Integrations: Paystack (card, bank transfer, USSD), Leaflet.js, Geolocation API, Resend (email)

DevOps & Tools: Git, GitHub, Vercel, Render, MongoDB Atlas, Postman

AI-Assisted Development: Claude API integration, GitHub Copilot

PROJECTS

DeliverTrack — Real-Time Delivery Tracking Platform | [delivery-tracker-black.vercel.app](#)

- Engineered a full-stack, three-role (customer/rider/admin) delivery tracking platform, resolving live location updates by broadcasting browser Geolocation data through per-order Socket.io rooms authenticated with JWT
- Delivered a production-ready payment flow by integrating Paystack with server-side transaction verification, closing the gap between checkout and confirmed order status
- Built an admin analytics dashboard using Recharts to surface order volume, revenue, and 7-day trend data for business visibility
- Shipped to production across two environments (Vercel frontend, Render backend + MongoDB Atlas), independently diagnosing and fixing a Linux case-sensitivity deployment bug invisible in local Windows development

EscrowNG — Peer-to-Peer Escrow Platform | [escrowng.vercel.app](#)

- Designed a four-stage transaction lifecycle (pending → funded → delivered → completed) to give buyers and sellers a secure, trust-minimized fintech workflow
- Built a dispute resolution system and seller-invite flow, enabling structured conflict handling without manual intervention
- Implemented Paystack-funded escrow with JWT-secured transaction state tracking

InvoiceNG — SaaS Invoicing & Payments Platform | [invoice-ng-olive.vercel.app](#)

- Built a SaaS invoicing tool for Nigerian freelancers, reducing manual invoice creation to a guided flow with client management, line-item tracking, and NGN-formatted tax calculation
- Automated the payment collection loop by integrating Paystack verification with Resend-triggered email delivery, removing manual follow-up

ChopFast — Food Delivery Platform | [chopfast.vercel.app](#)

- Built a full-stack food ordering platform for the Lagos market with live geolocation and interactive Leaflet.js delivery maps
- Integrated multi-channel Paystack payments (card, bank transfer, USSD) alongside JWT auth, cart, and order tracking

Gadget Store — E-Commerce Platform | [gadget-store-app-topaz.vercel.app](#)

- Built a full-stack electronics storefront with live product search, category filtering, and a complete cart-to-checkout flow

FinTrack — AI-Powered Finance Tracker | [fintech-frontend-khaki-two.vercel.app](#)

- Integrated the Claude API to generate personalized financial insights from user transaction data, extending the app beyond standard CRUD tracking
- Built income/expense logging with Recharts visualizations and native Nigerian Naira formatting

EXPERIENCE

Freelance Full-Stack Developer — Self-Employed, Remote (2024 – Present)

- Design and ship full-stack web applications for clients end-to-end using React, TypeScript, Node.js, and MongoDB

- Build and maintain REST APIs, implement JWT-based authentication, and design database schemas from client requirements
- Deliver cross-browser, responsive frontends with component-based, maintainable code
- Operate independently across the full delivery cycle — requirements, build, deployment, and client handoff — via Fiverr and Contra

EDUCATION & TRAINING

- Tech Crush — Cohort 5, Full-Stack Web Development (intensive program)
- freeCodeCamp — Responsive Web Design; JavaScript Algorithms and Data Structures
